

1. Summary

Background

TÜV SÜD Certification and Testing (China) Co., Ltd. Guangzhou Branch (hereinafter referred to as TÜV SÜD) was commissioned by Zhongtian Radio Frequency Cable Co., Ltd. to verify GHG emission. Between 2025-02-17~2025-05-12, TÜV SÜD auditor Johny Wang and Tony Sun conducted the carbon verification activities of the responsible party to evaluate the conformity of GHG related verification specification for the organization, including the principles and requirements of the standards or GHG scheme that applied to the verification Category.

Verification conclusion

After verification, TÜV SÜD Certification and Testing (China) Co., Ltd. reached conclusions as below:

- 1) The Organization's GHG emissions verification verifies claims made by responsible party in accordance with standard ISO 14064-3:2019.
- 2) GHG-

our commitment to the society and employees' health, safety and environment, and adhere to the resource-saving and environment-friendly road.

Responsible Party Greenhouse Gas Claim (Self-declaration)

The total GHG emissions of Zhongtian Radio Frequency Cable Co., Ltd.

- Quantified emission source attributes
- Non-biogenic GHG emissions and removals
 - Anthropogenic biogenic CO₂ emissions and removals
 - Anthropogenic biogenic emissions and removals of other GHGs
 - Non-anthropogenic biogenic GHG emissions and removals

3.2. Assessment of GHG data and information

Activity data and emission factor compliance									
The verification team verified each activity data in the enterprise greenhouse gas emission report submitted by the enterprise. The verification included the values, units and sources of activity data, the values and sources of emission factors, and the GHG calculation process.									
The verification information are as follows:									
Emission categories	Emission source	Facilities or process	Accounting method	Activity data	Unit	Source of activity data	Emission factor/Mass balance coefficient	Source of activity data	GHG emission (tCO ₂ e)
Category 1: direct GHG emissions and removals								2006 IPCC Guidelines for National Greenhouse Gas Inventories

GHG emission analysis

Analysis of emissions of different categories of emission sources

- Among the emission categories, anode copper strip is the largest emission category, accounting for about 13.16%.

To fulfil corporate social responsibility and reduce the organization's supplier and design.

Analysis on emissions of different greenhouse gmET@424
